

VIVEK BHANDARI

Vulnerability Management Analyst — Application Security — CTF Player

📞 +91-7505172363 ✉ vivekbhandari.sec@email.com 🔗 linkedin.com/in/vivekbhandarisecc 📁 github.com/vivekbhandarisecc

Summary

Cybersecurity and Vulnerability Management enthusiast with hands-on experience in web security testing, vulnerability assessment, CVE analysis, and security research through CTF competitions. Experienced in identifying security vulnerabilities, risk prioritization, remediation strategies, and application security testing using real-world labs and security platforms. Strong analytical thinker with practical exposure to OWASP Top 10 vulnerabilities, penetration testing, and security automation.

Technical Skills

Security: Vulnerability Management, CVE Analysis, Risk Prioritization, Patch Management, Remediation, Exposure Management, Security Operations

Web Security: OWASP Top 10, SQL Injection, XSS, CSRF, IDOR, Broken Access Control

Tools: Burp Suite, Nmap, Nikto, Gobuster, Wireshark, Metasploit

Programming: Python, Bash, JavaScript, SQL

Platforms: Linux, Docker, Git, FastAPI

Other: Penetration Testing, Security Automation, Log Analysis, Threat Analysis

Projects

- **URLPathGuard – Web Attack Detection Platform (FastAPI)** 2025
 - Built a full-stack web attack detection platform for monitoring and detecting malicious web requests.
 - Implemented detection logic for brute force attacks, path traversal, abnormal request patterns, and anomaly indicators.
 - Developed log ingestion, parsing, attack detection, and alert management APIs.
 - Designed modular architecture for scalable integration with security monitoring pipelines.
- **Web Application Security Lab Assessment** 2025
 - Conducted manual and automated security testing on OWASP Juice Shop, DVWA, and PortSwigger labs.
 - Identified vulnerabilities including SQL Injection, XSS, CSRF, IDOR, and Broken Access Control.
 - Documented vulnerability reports including severity classification, impact analysis, and remediation strategies.
 - Practiced vulnerability assessment workflows including discovery, validation, prioritization, and remediation.

Capture The Flag (CTF) Experience

- Active cybersecurity CTF player specializing in Web Exploitation, Cryptography, Reverse Engineering, and Binary Exploitation.
- Member of team **VOID_Walkers** ranked **Top 40 globally on CTFtime.org**.
- Solved real-world security challenges involving vulnerabilities, cryptography attacks, exploitation, and forensic analysis.
- Experienced in vulnerability discovery, exploit development, and security research under time constraints.

Training & Workshops

- Web Application Security Training – Nullclass (OWASP Top 10, exploitation techniques)
- Bug Bounty & Cybercrime Investigation Workshop – IndianCyberClub

Education

Bachelor of Technology (B.Tech) – Computer Science
Govind Ballabh Pant Engineering College

2024 – 2028
